

# 5 Key Advantages of Running Siemens NX for CAD on AWS AppStream

Using Siemens NX for CAD on AWS AppStream offers several benefits for aerospace and satellite enterprises.

## SCALABILITY AND PERFORMANCE

Easily scale computing resources up or down to accommodate project demands.

Seamlessly integrate Siemens NX with other design, simulation, or PLM tools in the cloud.

## REMOTE WORK ENABLEMENT

Allow remote and distributed teams to access Siemens NX from anywhere with an internet connection.

Attract top talent regardless of their location, potentially reducing recruiting costs.

## REDUCED TOTAL COST OF OWNERSHIP (TCO)

Shift from a capital-intensive model to a predictable operational expenditure model with AWS's pay-as-you-go pricing structure.

Eliminate the need for expensive, high-end workstations.

## ENHANCED DATA SECURITY

Minimize the risk of data breaches through robust security measures, including encryption, access control, and secure data storage.

Ensure compliance with industry and regulatory standards for data protection.

## DISASTER RECOVERY AND REDUNDANCY

Reduce the risk of downtime and data loss with built-in disaster recovery and redundancy features.

Safeguard business continuity and minimize potential financial losses.
